contract

This traditionally procured contract, comprised the refurbishment of, alterations and modernisation to the existing complete ground floor.

description of work carried out

Refurbishment and alterations to the complete internal ground floor. The ground floor houses reception, practice rooms, general offices, toilets, disability stair lift and a communal kitchen.

In reception a purpose made counter was installed, which was manufactured to the Architects specification within our bespoke Joiners Workshop to the highest quality. Distinctive suspended ceilings with incorporated designed lighting enhanced by the floor coverings offer a modern and inviting feel to the reception.

Practice rooms are designed to be functional, spacious and light. A patented suspended sprung dance floor was installed and designed for high shock absorptivity. In addition all practice rooms were installed with increased sound proofing.

Having successfully completed phase one we have negotiated phase two which comprises additional refurbishment to the bar and back fittings, toilets, changing rooms and main hall all of which will be completed on time.
